TOWING BASICS

Gross trailer weight (GTW)

The gross trailer weight is the total weight of a trailer and its cargo. For example, GTW = boat + trailer + cooler + fishing gear. It is vitally important to know the GTW to ensure safe towing. It can be measured using the CURT BetterWeigh™ (page 98) or a vehicle scale.

Weight carrying capacity (WC)

The weight carrying capacity is the total weight a trailer hitch is safely rated to tow without the assistance of a weight distribution system. When towing, the weight capacity is always limited to the lowest-rated towing component.

Tongue weight (TW)

Tongue weight is the downward force of the trailer at the coupling point. Proper TW should be about 10% to 15% of the GTW. TW can be measured using the CURT BetterWeigh™ (page 98), using a commercial scale or bathroom scale, following the method below.

Multiply scale reading by three

Weight distribution capacity (WD)

The weight distribution capacity is the maximum amount of weight a trailer hitch can safely tow with a weight distribution hitch installed. A weight distribution hitch distributes a portion of the TW across the vehicle and trailer to promote level towing. See page 174 for WD products.

Measuring ball mount drop and rise

When selecting a ball mount, it is important to determine drop / rise for leveling the trailer. Use the diagram below to find this value. B minus A equals C. If C is negative, this indicates the amount of drop needed. If positive, it indicates rise.

Level towing

Using a ball mount with the proper amount of drop or rise will allow for level towing across both trailer and vehicle. Without a level vehicle-trailer combination, the trailer can tend to wander and can even impair the driver's control over the vehicle.

TRAILER BALLS

**SHOCKDROP™
TECHNOLOGY**

For Rebellion™ XD cushion hitches see page 106

ShockDrop™ technology is an adaptive, dynamic towing system that is engineered to reduce vibrations, rattling and strain on the vehicle. It does this by using an integrated, flexible polyurethane isolator for improved comfort and control. Compared to other cushion hitch options, ShockDrop™ is simple and virtually maintenance-free.

Enhanced comfort.

Unlike a traditional metal-on-metal towing connection, ShockDrop™ absorbs unevenness in the road to maximize comfort

Improved control.

ShockDrop™ dynamically reacts to jarring, limiting its effects and giving the driver increased control on the road

Unmatched confidence.

Unlike a cushion hitch with an airbag or bearings, ShockDrop™ is virtually maintenance-free and is tested for thousands of cycles

**ROCKERBALL™
TRAILER BALLS**

For RockerBall™ products see adjacent page

- Dampens jerking and jarring from bumps and potholes for smoother towing
- Cushioned isolators reduce rattling and vibration for a more comfortable ride

BetterWeigh Towing Scale

Pkg#	Description
51701	Mobile towing scale

What BetterWeigh™ measures

How BetterWeigh™ works | $\text{weight} = \text{force} \div \text{acceleration}$

Force is divided

Force is determined by measuring slip across the torque converter as the vehicle accelerates through 15 mph

By acceleration

An integrated accelerometer detects how quickly the vehicle takes off and measures changes in the vehicle's pitch

To calculate the weight

BetterWeigh™ calculates towing weights by gathering data from the OBD-II port and applying Newton's Second Law

SL™ SECURELATCH™ SERIES AUTO-LOCKING TECHNOLOGY

SecureLatch™ streamlines the trailer hookup process with a revolutionary auto-locking design. Unlike any other coupling device, the primary latching mechanism automatically locks into place as you back up to the coupler. No manual coupling required! Simply insert the secondary safety pin, and you're ready to tow.

How Auto-Locking Technology Works

Strike the plate.

As you back up the vehicle, a built-in back plate helps position the coupler or lunette ring for easier hookup

Drop the coupler.

As the coupler is lowered onto the pintle hitch, SecureLatch™ automatically locks without any manual coupling required

Tow with confidence.

Finally, insert the secondary safety pin, connect the safety chains and you're ready to tow with confidence and without chucking

What makes SecureLatch™ different?

Auto-locking system,
no manual coupling

Available in various
configurations

Austempered, cast iron
for superior strength
and wear resistance

Built-in back plate
for easier hookup

WIRING SYSTEMS

Two-wire system

The two-wire system is the simplest form of vehicle and trailer wiring and is still used by some vehicles today. This system sends the stop and turn signals along one wire, and the taillight signal along a second wire.

Three-wire system

The three-wire system is the most common in the automotive industry. It sends the stop, taillight and turn signals along three separate wires. Vehicles with this system usually require a converter.

PWM system

More and more vehicles today use a PWM (pulse width modulation) system. Sometimes called a 'multiplex', this type of wiring is able to control multiple lighting functions through a single wire by varying the signal intensity. PWM systems can use incandescent or LED lights. There are generally two types: ST systems and STT systems.

THE INNOVATION LEADER IN BRAKE CONTROLLERS

BRAKE CONTROLLERS

HOW TO SELECT A BRAKE CONTROLLER

There are two basic types of brake controllers. Inertia-based brake controllers use accelerometers to measure the change in velocity or inertia of the tow vehicle when braking. Time-based brake controllers apply a steadily increasing amount of brake power, based on the gain setting and sensitivity adjustment specified by the driver.

Answer the following questions to help determine which brake controller is the best fit for your customer.

What are they towing?

Heavy-duty

An inertia-based brake controller is ideal for towing heavy or fragile cargo. It will perform much smoother stops, resulting in less stress on the cargo and on the vehicle.

Light-duty

If your customer is planning to tow a relatively lightweight trailer, a time-based brake controller may be sufficient. CURT's time-based controllers are more budget-friendly and perform well with lighter loads.

How often do they tow?

Frequently

If your customer is planning to tow more than twice a year, the precision of an inertia-based brake controller will help protect the life of the vehicle and trailer.

Occasionally

If your customer will only tow once or twice a year, they may prefer the simplicity and relatively lower cost of a time-based controller. Time-based controllers also require very little effort to set up.

BetterWeigh Towing Scale

Pkg#	Description
51701	Mobile towing scale

On vehicles with two-wire electrical systems that require a powered converter, the converter's red wire is not used as a stoplight connection and needs to be grounded.

**ELECTRICAL
CONVERTERS**

TAILLIGHT CONVERTERS

For vehicles that are not compatible with CURT custom wiring options, a taillight converter provides a reliable alternative. CURT taillight converters splice into the vehicle's wiring system and provide a standard 4-way flat trailer connector. **Use the Application Guide on page 30 to find the right wiring solution for your customer.**

**ELECTRICAL
CONVERTERS**

3-TO-2-WIRE TAILLIGHT CONVERTERS

For taillight converter applications go to page 30

CUSTOM WIRING

CUSTOM WIRING & T-CONNECTORS

For custom wiring application guide go to page 30

Custom wiring is the easiest way to equip a vehicle with a trailer wiring connection. There are two types: harnesses and connectors. Both are made vehicle-specific and install with no cutting or splicing.

- Provides a standard 4-way flat connector on the vehicle for plugging in trailer wiring
- Simple plug-and-play design eliminates the need for cutting or splicing
- Equipped with a taillight converter if needed
- Dust cover included to keep 4-way flat clean when not in use

Harnesses

Custom wiring harnesses use multiple plugs to 'T' into the taillight assembly

Connectors

Custom wiring connectors use a single plug to plug into a specific OEM socket

ELECTRICAL ADAPTERS

7-WAY RV BLADE FOR LED TRAILER LIGHTS

Did you know?

These adapters are designed for vehicles with a lamp-out indicator. When towing a trailer with LED taillights, the low electrical draw of the LEDs will trigger the indicator. These adapters allow the vehicle to recognize the LED taillights and function normally.

- Allows a 7-way RV blade to connect to other trailer plug types
- Enables vehicles with a 7-way RV blade socket to recognize LED trailer lights
- Built-in, integrated resistors for computers that do not recognize LED lights
- Simple plug-and-play design eliminates the need for cutting or splicing

Scan to learn more

How active sway control works

Spring-loaded bearings maintain pressure

Bearings within the head maintain pressure on the spring bars, actively aligning the trailer with the vehicle.

Active resistance

Lateral forces compress the bearings into a rotational groove to actively resist sway. More sway = greater resistance.

Increased control

Downward force on the spring bars increases sway control. More trailer weight = more sway control.

Smooth turning

When turning, the bearings compress to their critical limit, freeing them to make a smooth turn.

- Options available for Ford, GM, Nissan and Ram
- Compatible with most CURT 5th wheel hitches
- **See page 202 for long- and short-bed options**

- Ideal for increasing clearance for short-bed trucks
- Available in 16K to 25K capacities
- **See page 204 for full features and benefits**

Custom Under-Bed Brackets

Each designed to fit a specific truck application, our custom brackets install in less time and provide a solid mount for our industry-standard base rails.

MOUNTING A 5TH WHEEL HITCH

There are several components that make up a 5th wheel hitch, and these components are determined by truck type and customer preferences. Answer the following questions to help choose the right hitch for your customer.

What size is the truck bed?

The length of the truck bed will determine which type of mounting platform the 5th wheel hitch requires: legs or a slider. **Note: A slider may be required for long-bed trucks. Review each configuration before purchase.**

LONG-BED

5th wheel legs are the standard 5th wheel mounting method. A long-bed truck will provide the necessary room for this option.

For long-bed trucks, follow the orange path.

SHORT-BED

A 5th wheel slider is recommended on short-bed trucks. A slider adds clearance between the cab and the trailer when turning.

For short-bed trucks, follow the blue path.

Measuring for a 5th wheel slider

1. Trailer width \div by 2 = X
2. Distance from truck cab to coupling point = Y
3. Truck-trailer clearance: $Y - X = Z$

If Z is negative
you need a
5th wheel slider

A | OEM PUCK SYSTEM OPTIONS

Many trucks today, specifically from Chevrolet, Ford, GMC, Nissan and Ram, come with a built-in mounting platform in the bed called a puck system. A puck system makes installing a CURT 5th wheel hitch very easy.

LONG-BED WITH OEM PUCK SYSTEM

If the long bed has a puck system, select a 5th wheel hitch with OEM puck system legs or rails.

See our complete kits starting on page 189.

SHORT-BED WITH OEM PUCK SYSTEM

If the short bed has a puck system, select an OEM puck system roller or rail option to mount the 5th wheel.

See our complete kits starting on page 192.

5TH WHEEL WEDGES

A rotating 5th wheel pin box creates an alternative pivot point for the 5th wheel connection, providing the 5th wheel trailer with a wider turn radius. However, because of this secondary pivot point, the primary pivot point must be fixed to keep the trailer from wandering. A 5th wheel wedge bolts onto the pin box, locks up the kingpin and keeps it from swiveling.

- Allows a CURT A-Series™ or E-Series™ hitch to be used with rotating pin boxes, such as Sidewinder™ (Trademark of Horizon Global™)
- Bolts on behind the kingpin of the pin box to restrict movement between 5th wheel hitch and pin box
- Durable carbide black powder coat finish
- Made in USA (may include imported hardware)

SELECTING A GOOSENECK HITCH

There are three basic methods for installing a gooseneck hitch:

A | OEM PUCK SYSTEM OPTIONS

Many pickups today are factory-equipped with a truck bed puck system. A puck system provides attachment points for both gooseneck and 5th wheel towing.

For trucks with a puck system, an OEM puck system gooseneck kit is the easiest way to tow a gooseneck trailer. The components can be installed or removed quickly, as necessary.

See page 230 to select one of these kits.

B | HITCH & BRACKET OPTIONS

The traditional method for installing a gooseneck hitch is vehicle-specific brackets. CURT OEM-style gooseneck hitches are a unique variant of the traditional method, featuring an all-in-one, custom-fit design that bolts to the truck frame like a factory hitch. No additional brackets required. See page 232 for our OEM-style hitches.

We also offer a variety of traditional gooseneck hitches that mount with vehicle-specific brackets. Options include our Double Lock EZr™, original Double Lock™ and more. Start on page 234 for our traditional gooseneck hitch line.

C | EXISTING 5TH WHEEL BASE RAIL OPTIONS

For trucks with 5th wheel rails already installed, CURT offers 5th wheel rail gooseneck hitches. These 5th-wheel-to-gooseneck adapters easily drop into any industry-standard base rails.

A 5th wheel rail hitch provides a ball ready for towing a gooseneck trailer, and the hitch can easily be removed from the rails whenever necessary to allow for 5th wheel towing or clearing the bed for cargo.

See page 242 for 5th wheel rail goosenecks.

PROPER SAFETY CHAIN USAGE

Safety chains are required by law and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so the vehicle can safely turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper. For chain assemblies built to your exact specifications, contact your CURT sales representative.

HOW TO ORDER CUSTOM SAFETY CHAIN

- Step 1** - Determine the gross weight of the trailer
Example: 7,000 lbs. GTW
- Step 2** - Select chain required
Example: #82120 zinc-plated (7,800 lbs.)
Note: By law each individual chain must meet or exceed the GTW
- Step 3** - Determine the required length of chain
Note: The chains must be long enough to cross one over the other under the coupling point (see illustration to the left)
- Step 4** - Select hook(s) according to capacity and design
Example: #81900 clevis hook (7,800 lbs.)
- Step 5** - Contact your CURT sales rep for a quote

Federal law requires safety chains or cables to be secured while towing. Each individual chain or cable must meet or exceed the trailer weight.

LIMITED LIFETIME WARRANTY

CURT MANUFACTURING, LLC ("CURT") provides limited lifetime warranty coverage against defects in factory workmanship and materials for CURT® products ("Products") sold by authorized CURT dealers for use by retail (end use) consumers. This Limited Warranty is provided only to the original Product consumer, and applies only to the original installation. This Limited Warranty is not transferable and does not extend or apply to anyone else. For consumers in the U.S.: this Limited Warranty gives you specific legal rights; you also may have other rights, which vary from state to state.

This Limited Warranty is the sole and exclusive warranty provided by CURT, and all other warranties and conditions are excluded and disclaimed. **UNDER THE LAW OF CERTAIN STATES, THERE MAY BE NO IMPLIED CONDITIONS OR WARRANTIES FROM CURT APPLICABLE TO YOUR PRODUCT, AND ALL IMPLIED CONDITIONS OR WARRANTIES (INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE) ARE EXCLUDED AND DISCLAIMED WHERE ALLOWED BY LAW.** If implied warranties are imposed under any applicable state law, all such implied warranties are limited to the duration of the applicable provisions of this Limited Warranty. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

Each of the warranty coverage periods runs from the date of purchase of the Product (proof of purchase is required) and applies only to warranted defects that first occur and are reported to CURT within the applicable warranty period. CURT retains the right to determine to its reasonable satisfaction whether any claimed defect is covered by this Limited Warranty.

Certain items are excluded from Limited Warranty coverage by CURT, and this **Limited Warranty coverage does not apply to:**

REMEDIES UNDER THIS LIMITED WARRANTY

If a defect covered by this warranty occurs, CURT will repair or replace the Product, or refund the purchase price, in its sole discretion. This "repair, replacement or refund" remedy is the **sole and exclusive remedy** under this Limited Warranty. CURT has **no responsibility or liability for any incidental or consequential damages**, such as loss of use of vehicles or trailers, towing charges, storage charges, tire damage, labor and service charges for removing or reinstalling products, loss of or damage to personal property, or interest or finance charges, all of which are specifically **excluded and disclaimed** from this Limited Warranty. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

RESPONSIBILITY OF PURCHASER

The Purchaser must have proof of purchase to obtain service under this Limited Warranty. Contact CURT for a Returned Goods Authorization (RGA) and return instructions; CURT will not accept Products unless an RGA has been issued. The Purchaser must deliver the Product to CURT or an authorized CURT dealer along with the RGA number and proof of purchase.

The CURT Limited Warranty policy in effect on the date you purchased your Product determines the applicable warranty coverage, and subsequent or prior CURT warranties are not applicable to your Product. The terms of this Limited Warranty cannot be changed or modified, except by a written agreement signed by an officer of CURT. CURT reserves the right to improve its products through changes in design or materials without being obligated to the owners of the Products of the same or similar models.
